

Dan Bergenthal, PE

I have been active in ITE for over nine years. I served as a Utah Chapter Officer during 2003-2007 including Chapter President during 2006-2007.

Over the last ten years I have been involved in the Intermountain Section, attending most of the annual meetings, presenting once in Jackson and once at the Utah Chapter Annual Seminar. In 2007 I was also instrumental in convincing many fellow traffic engineers to become sanitary engineers by adopting the Utah Chapter's first section of highway in UDOT's Adopt-a-Highway program. Together we faithfully began the tradition of making our little piece of I-215 the cleanest section of highway in the state.

Professionally, I work for Salt Lake City as a Transportation Engineer and have been with the city for 10 years. I specialize in promoting alternative transportation, mainly through bicycle and pedestrian safety and facilities design. I also work on special projects for the city such as developing a city-wide wayfinding signage system and a program allowing free metered parking for fuel efficient, low polluting and alternative fuel vehicles.

I look forward to continuing my service to and association with the fine individuals involved in the ITE Intermountain Section as an officer for the next few years. I commit to you, the members, the necessary time and effort to make sure the Section continues to run smooth and provides top-quality annual meetings.

Jay Nelson, PE, PTOE

I am excited and look forward to the opportunity to work with the officers and members of the ITE Intermountain Section as an officer for the next few years. I have been active in ITE for over two decades starting when I was a student at BYU in the mid 80's. I had the privilege of serving as an ITE Utah Chapter officer from 2001 to 2006, serving as the President in 2005 – 2006. I have attended the Intermountain Section Annual Meetings almost every year for the last 13 years, and have presented at the annual meeting twice. I will commit the necessary time and effort to make sure the Section continues to run smoothly and provides top-quality annual meetings. Further, my employer, DMJM Harris, has also committed to support me in this assignment, if I am elected.

Professionally, I spent the first 8 years of my career working for a traffic consulting firm in southern California. I am a registered Traffic Engineer in California. I moved back to Utah to work for Centennial Engineering as a Senior Transportation Engineer and obtained my Utah PE license. I was one of the first engineers in Utah to obtain the PTOE certification. In 1997 I was hired to run Korve Engineering's Salt Lake City office. A little over a year ago Korve Engineering was purchased by DMJM Harris where I have continued to work as the office manager and a senior transportation engineer. My work experience includes corridor studies, Transportation Master Plans, transportation planning, transit studies, development planning, traffic impact studies, traffic safety studies, and traffic signal system studies. I look forward to my continued association with the great members of the Intermountain Section.
