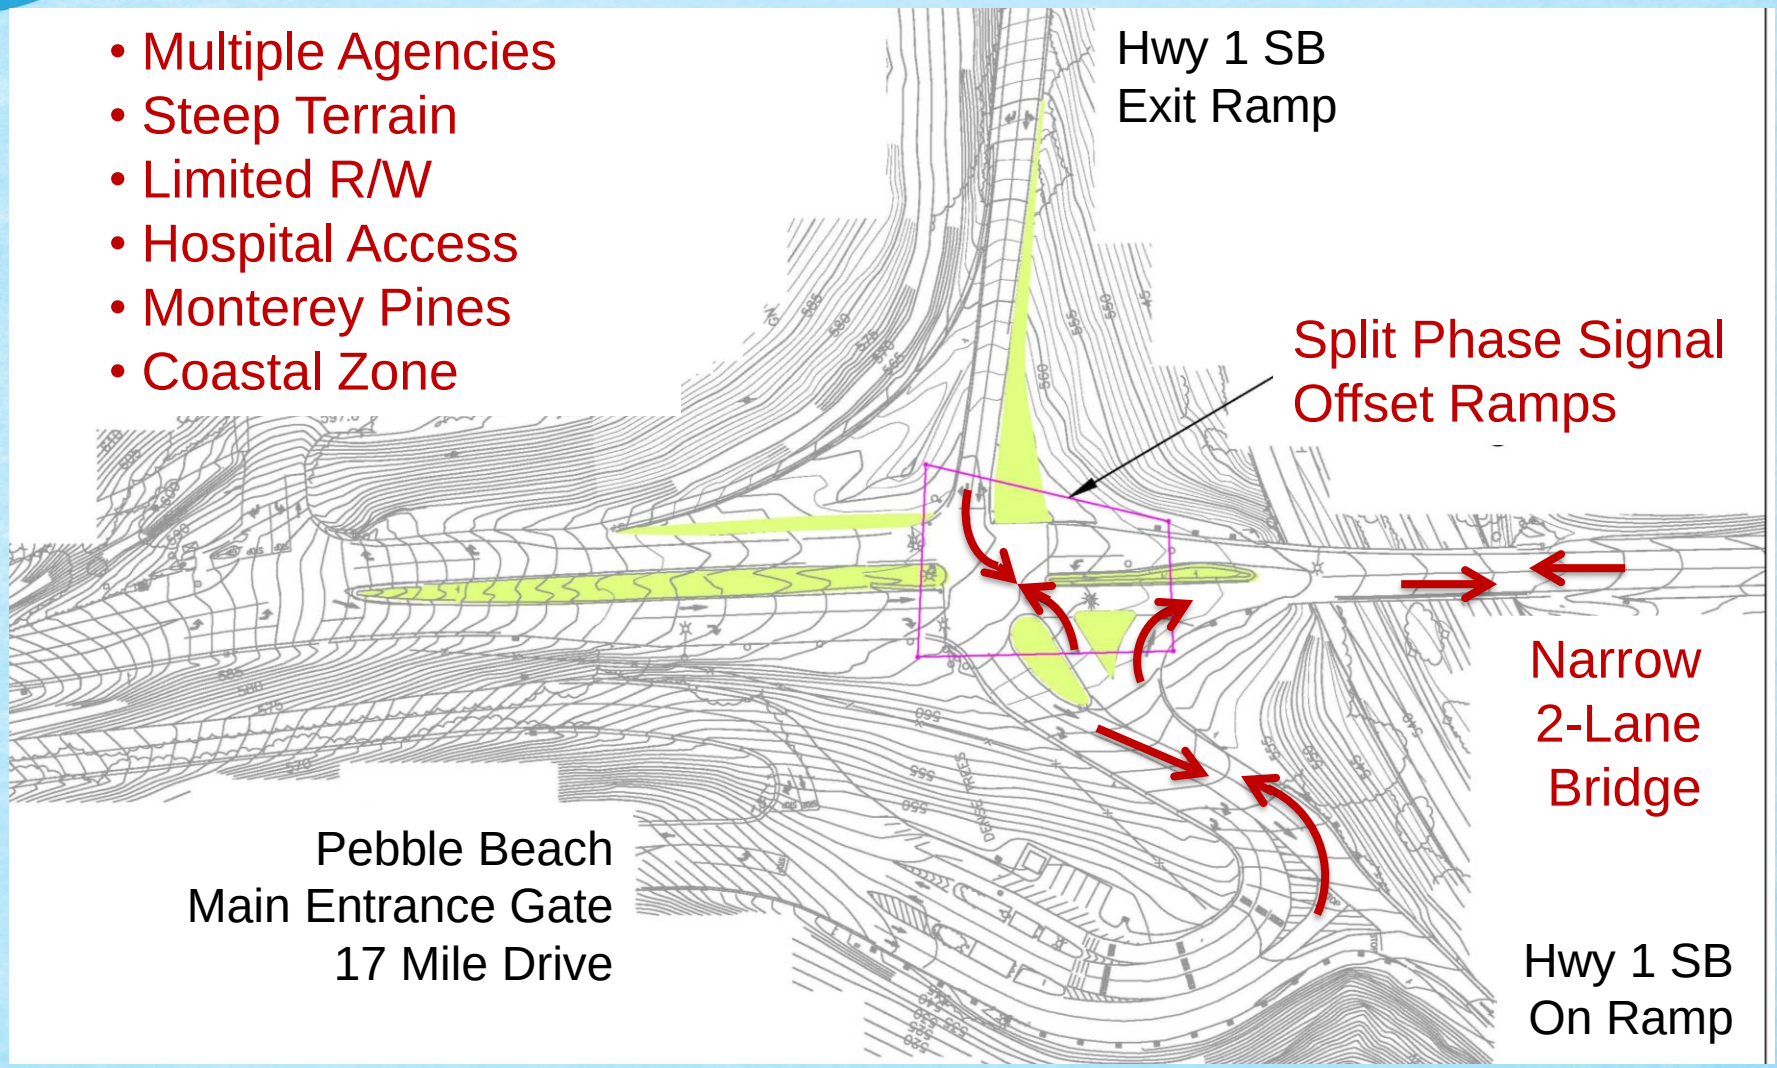
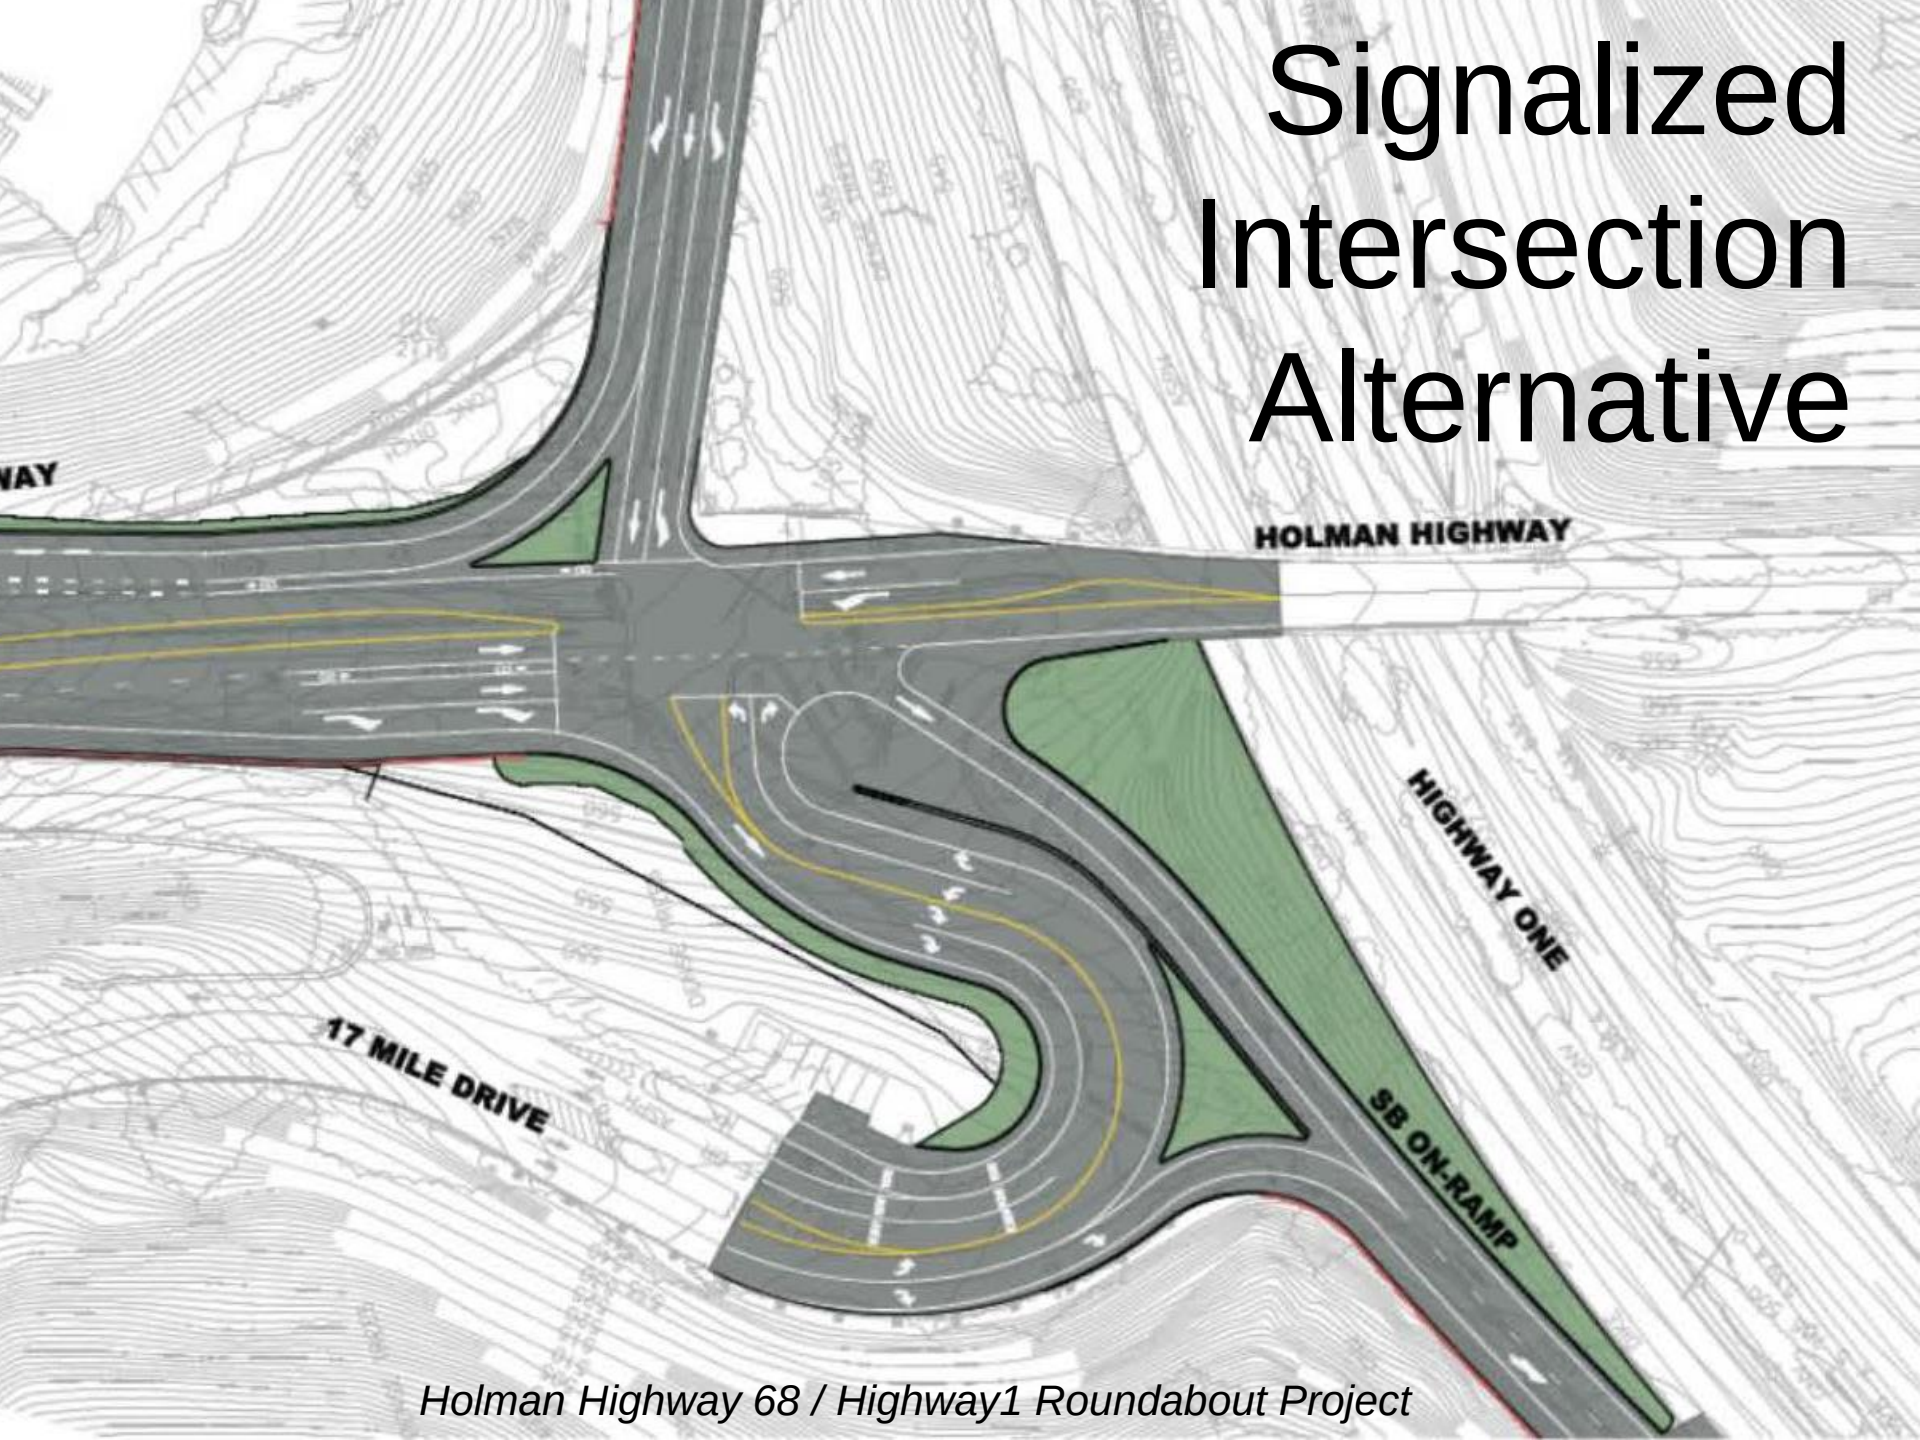
Existing Intersection - Signalized

- Multiple Agencies
- Steep Terrain
- Limited R/W
- Hospital Access
- Monterey Pines
- Coastal Zone

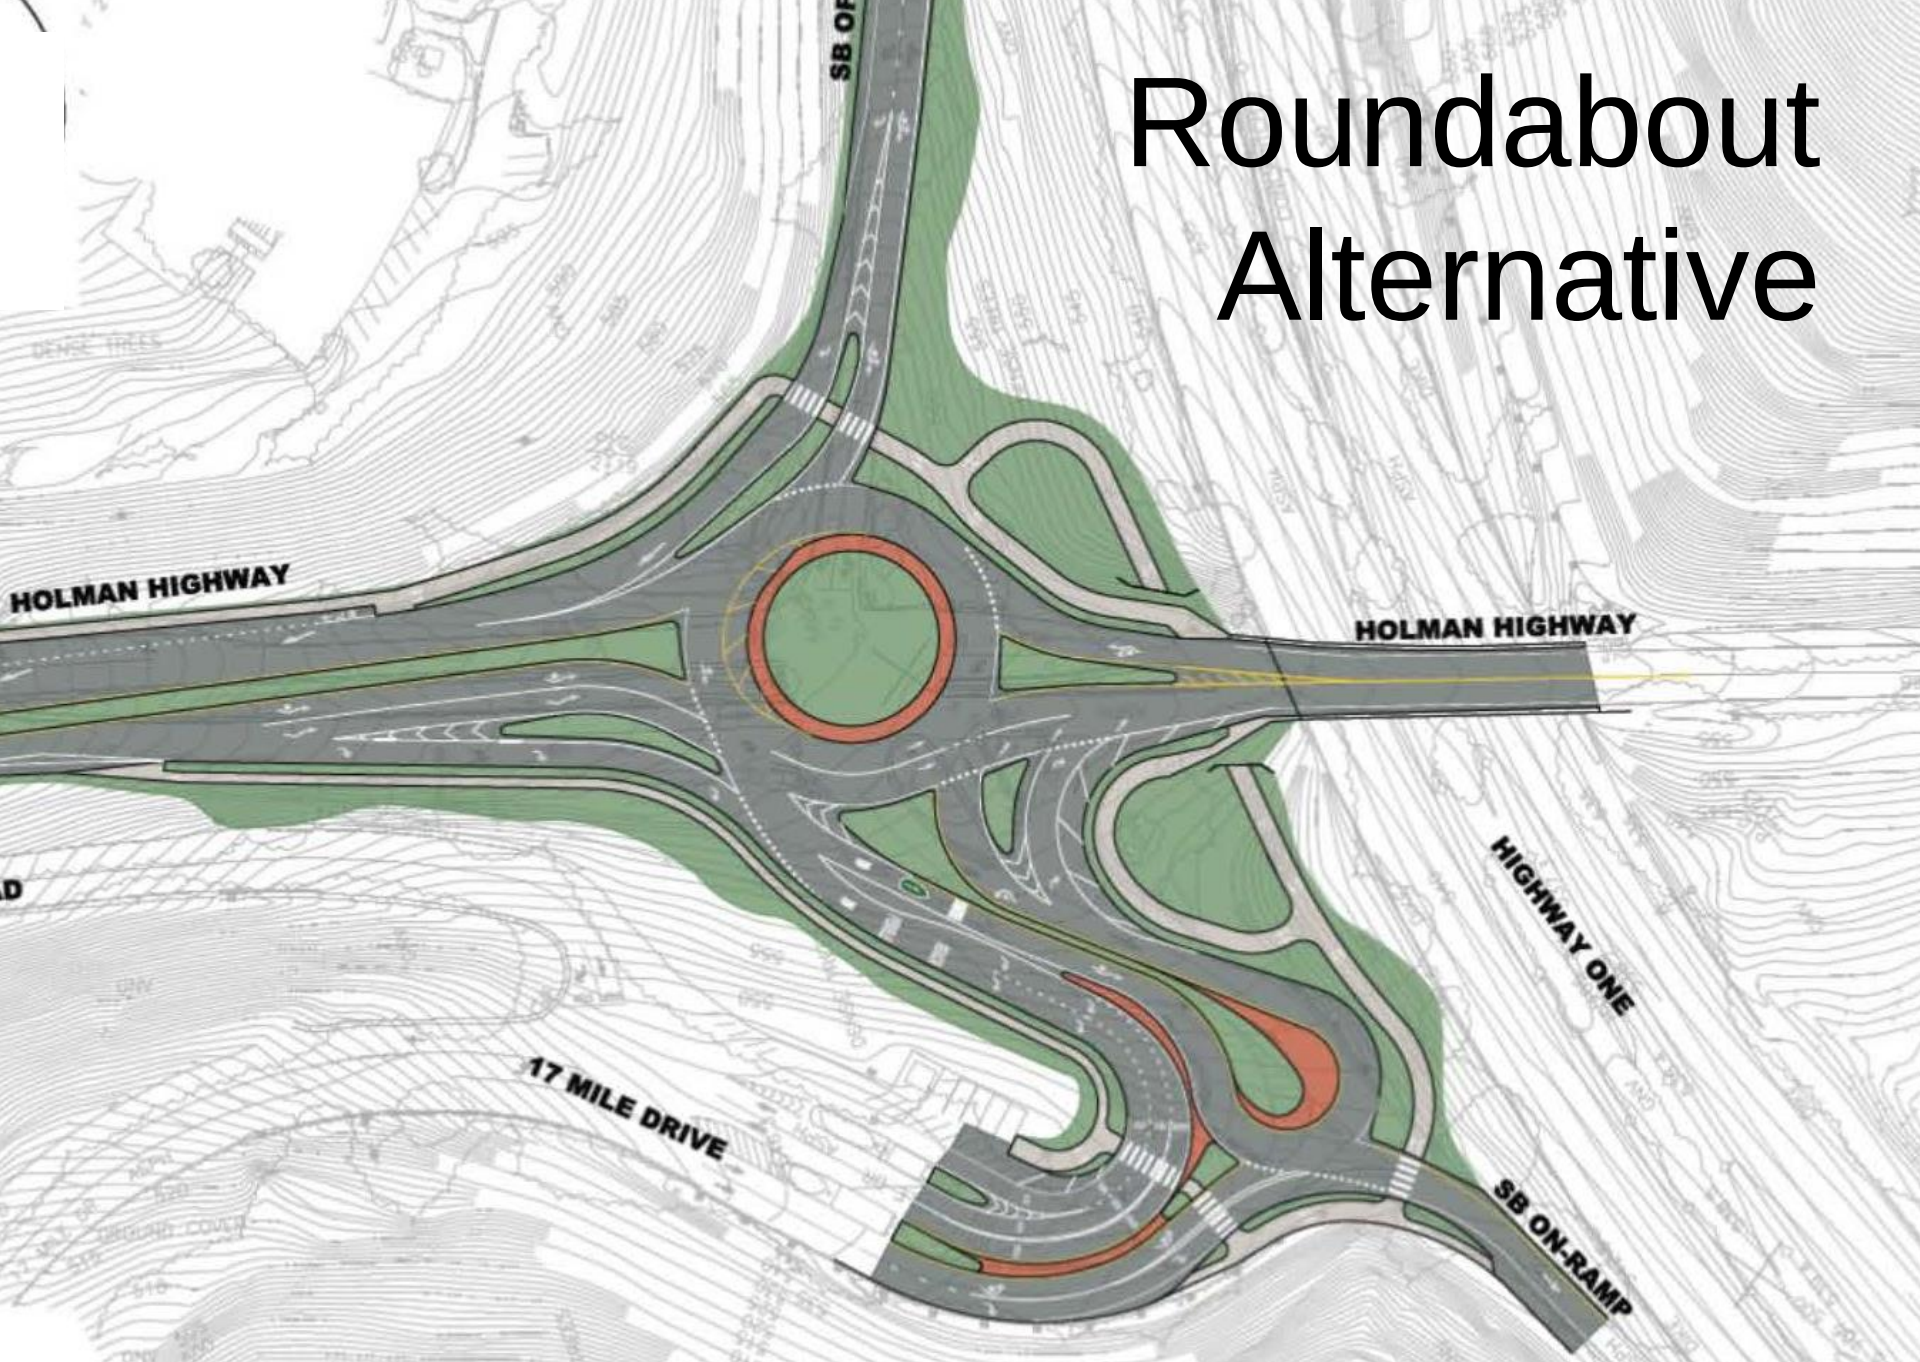


Congestion !

Signalized Intersection Alternative

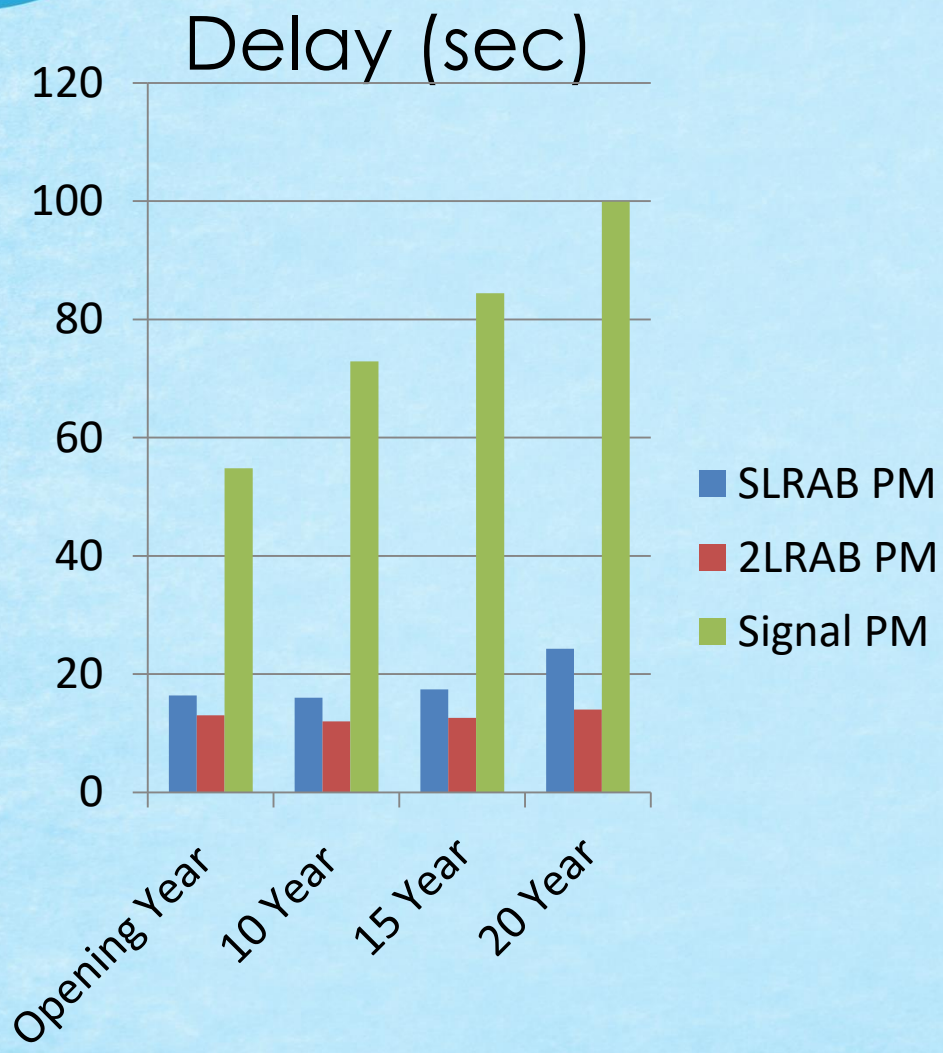


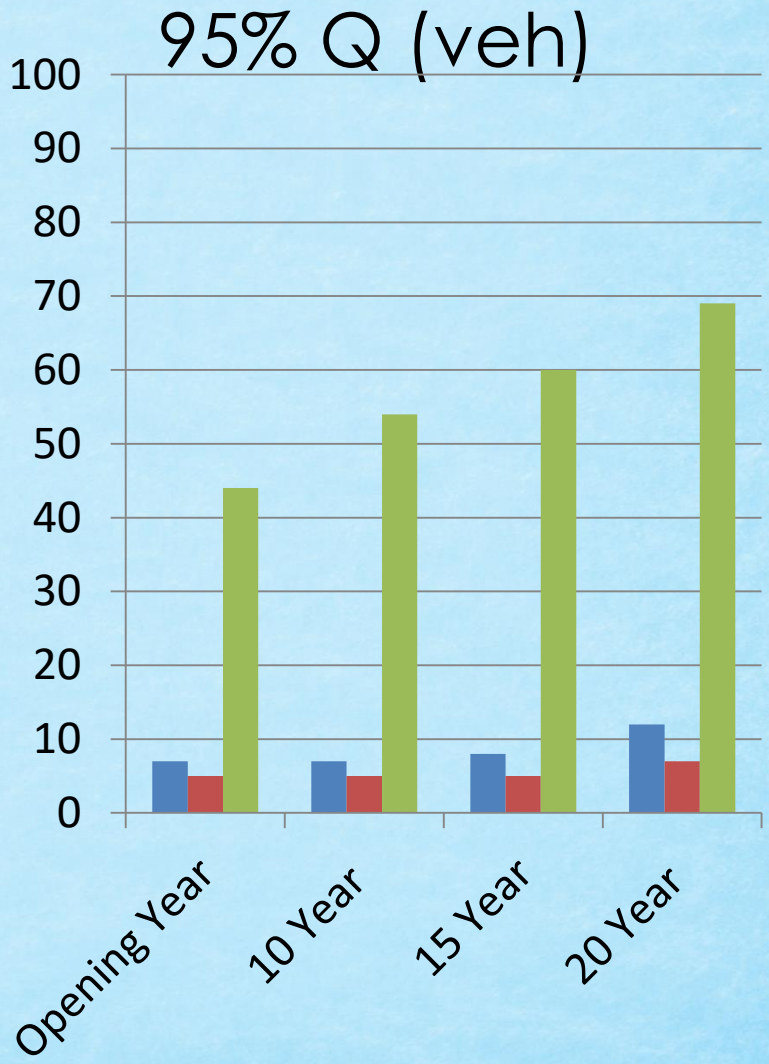
Roundabout Alternative



Holman Highway 68 / Highway1 Roundabout Project

PM Peak Hour Level of Service





Simulation – 2035 with Roundabout

Roundabout Geometry - Safety

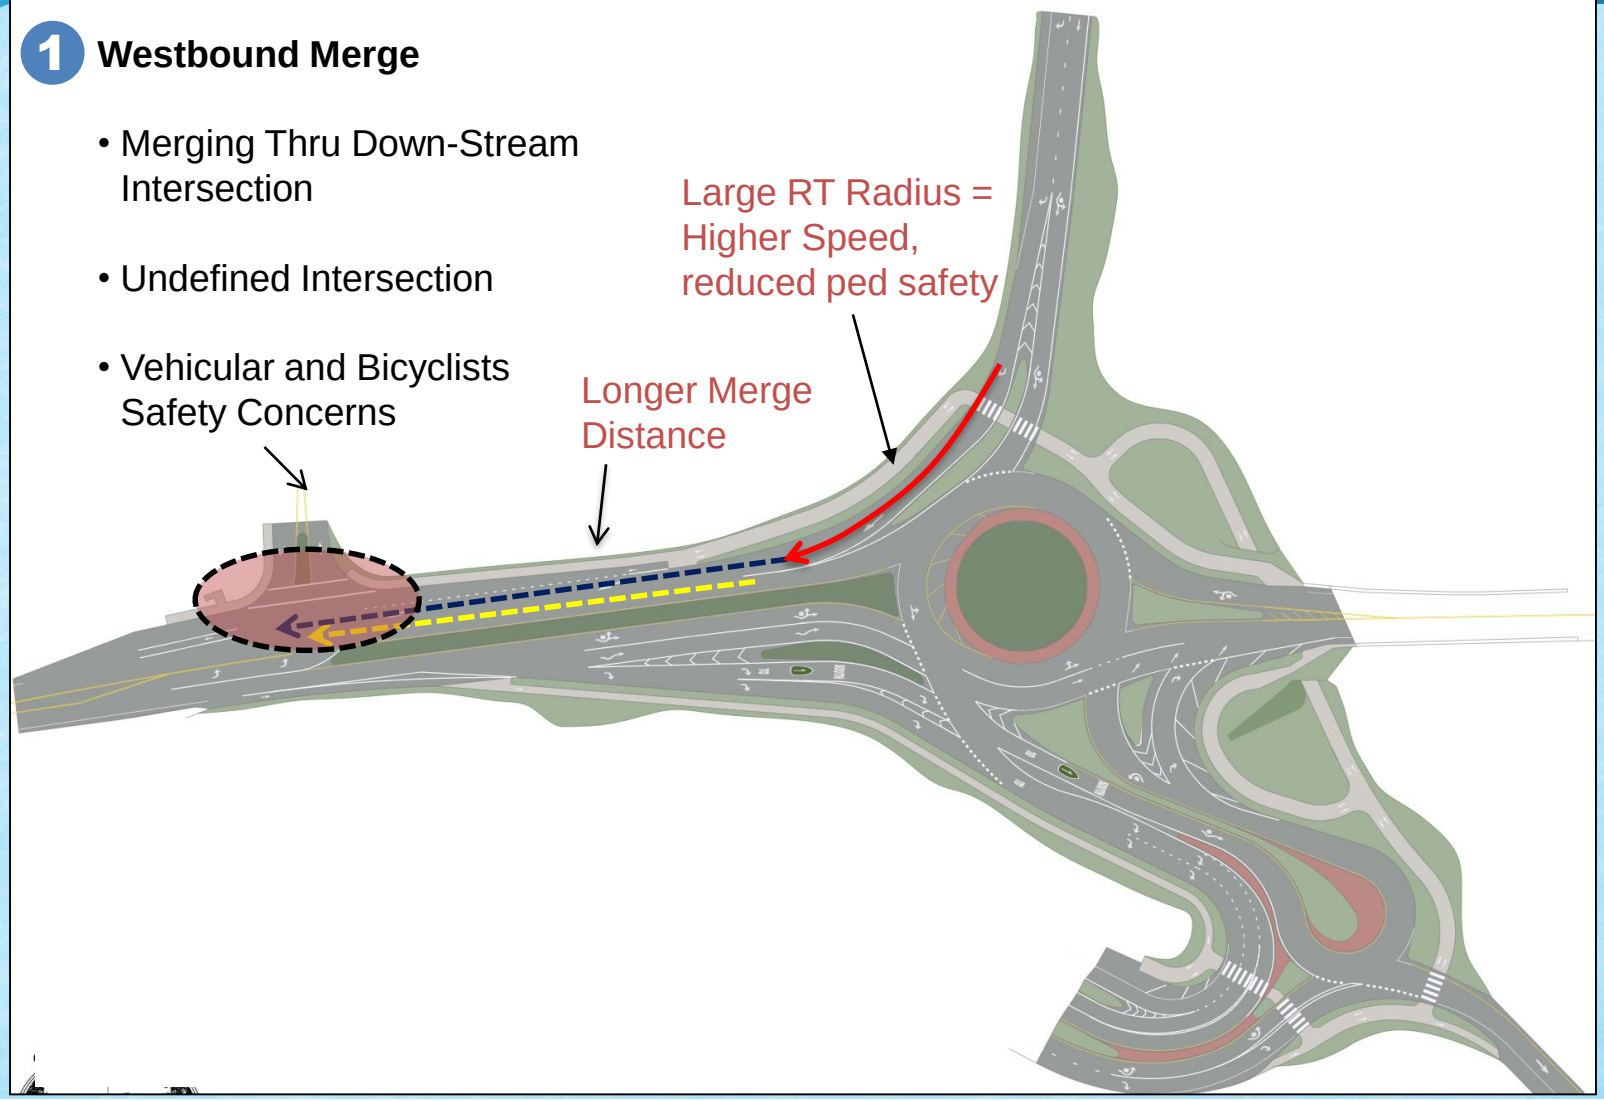
1. Westbound - Merge
   - Downstream of Intersection
2. Southbound Exit – Lane Choice
   - Way-Finding Issues
3. Entry Angles - Visibility
   - View Angles
4. Eastbound Exit - Merge to Narrow Bridge
   - Merge Distance
   - Semi Truck Turns

Design Challenges

Original Concept Design

1 Westbound Merge

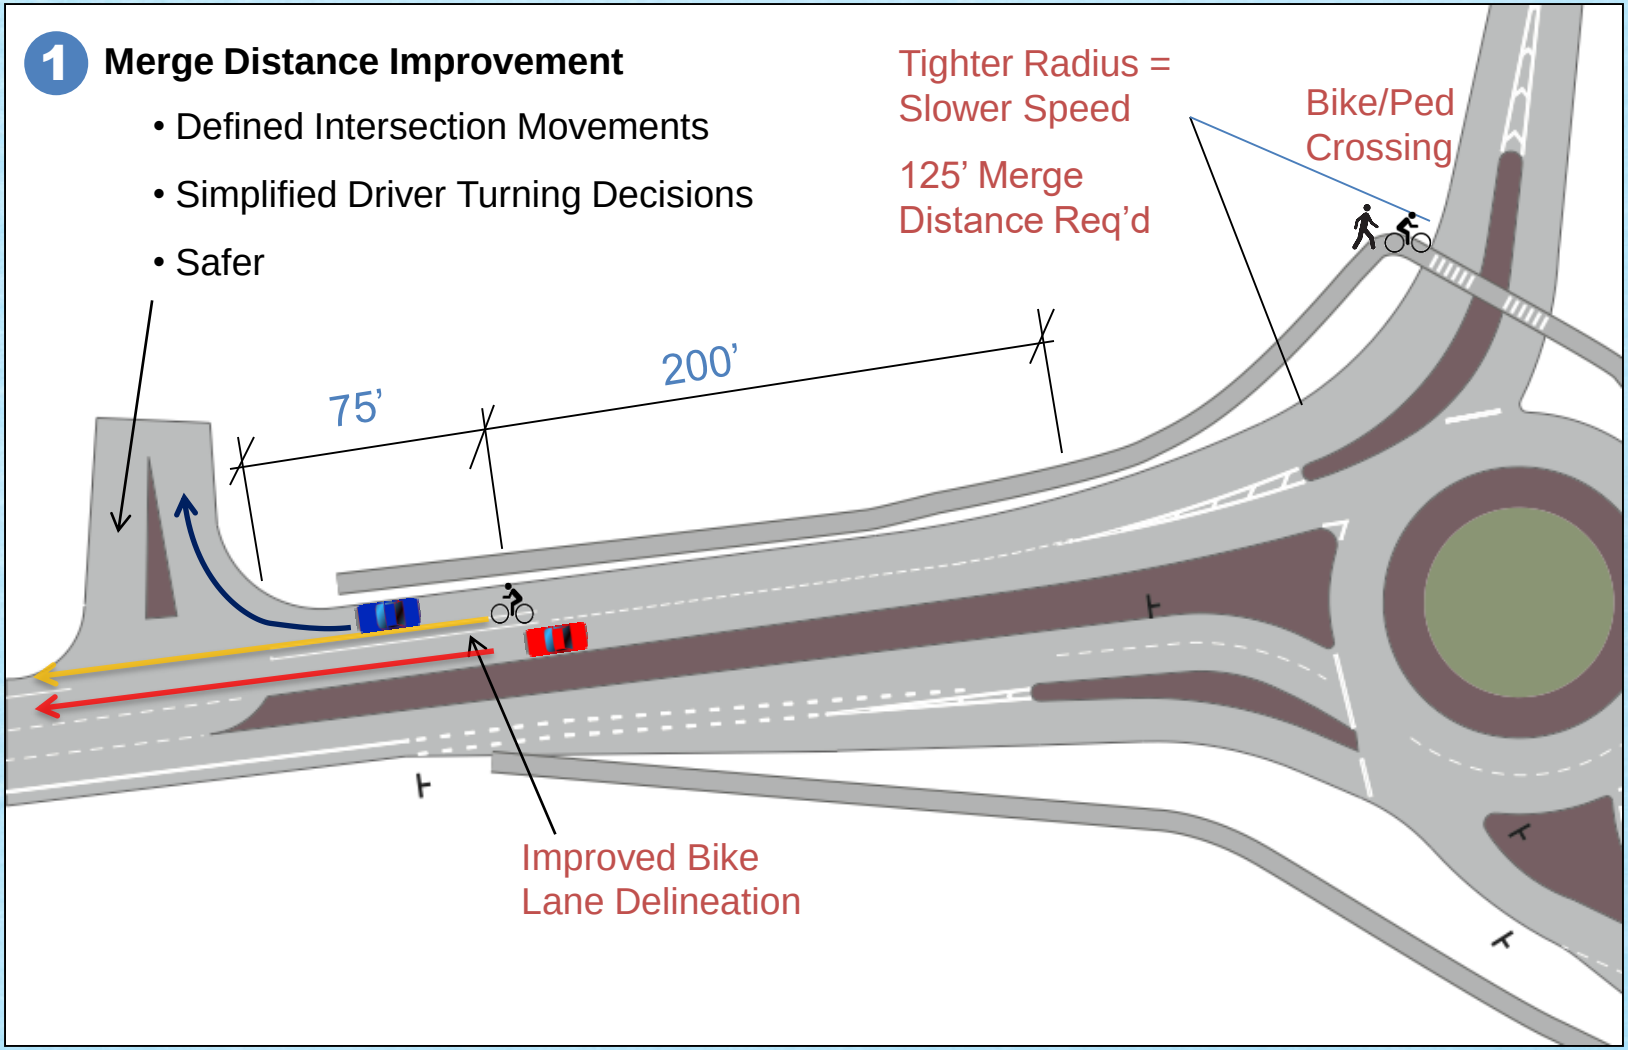
- Merging Thru Down-Stream Intersection
- Undefined Intersection
- Vehicular and Bicyclists Safety Concerns



Merge Distance Optimization

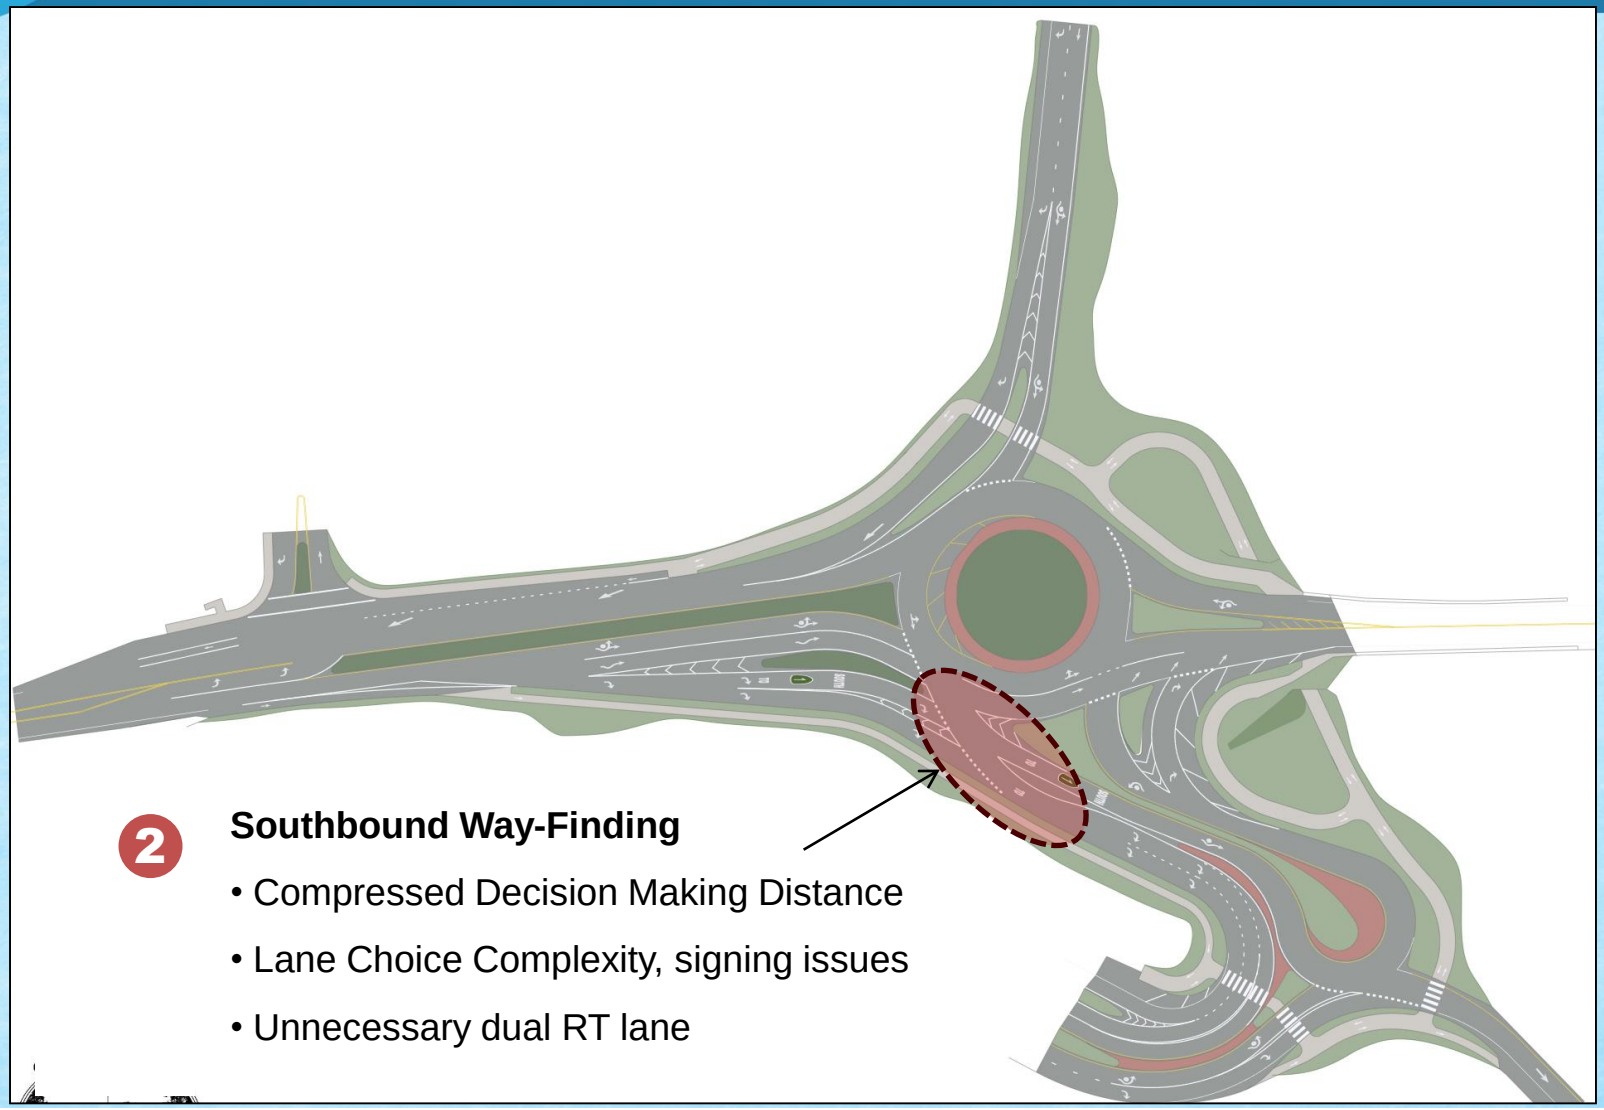
1 Merge Distance Improvement

- Defined Intersection Movements
- Simplified Driver Turning Decisions
- Safer



Design Challenges

Original Concept Design



2 **Southbound Way-Finding**

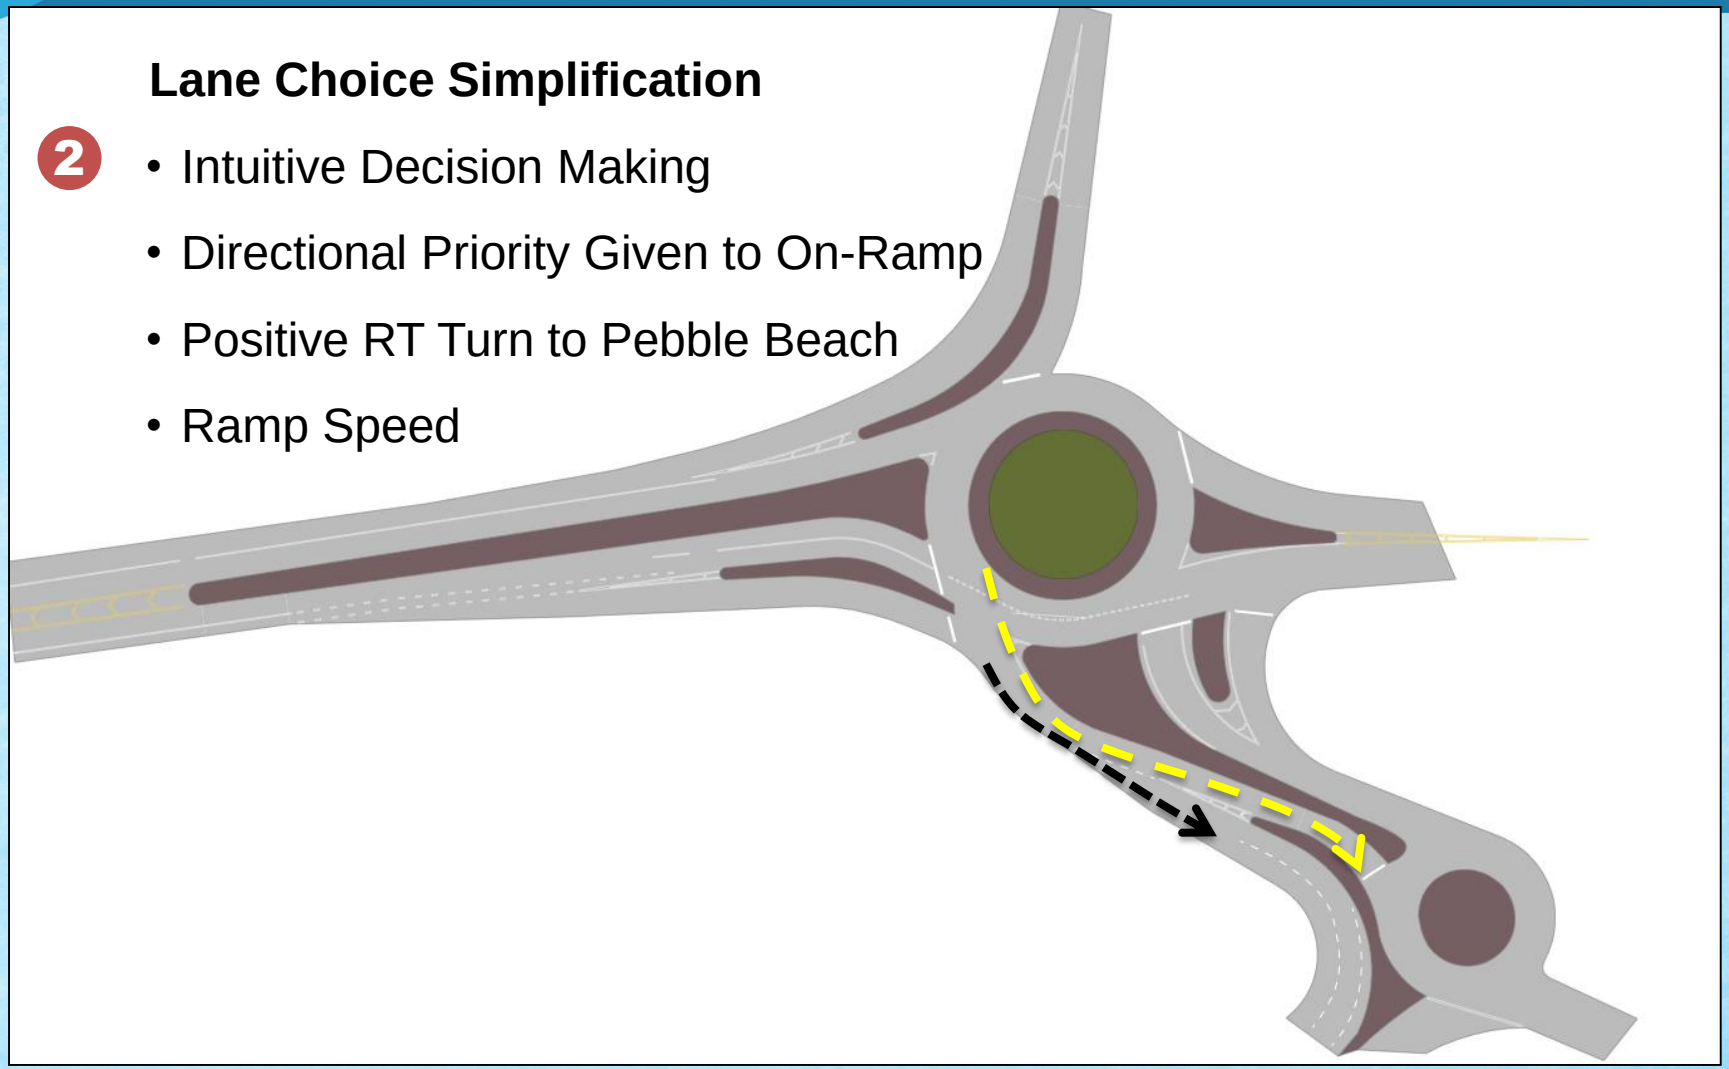
- Compressed Decision Making Distance
- Lane Choice Complexity, signing issues
- Unnecessary dual RT lane

Design Optimization

Lane Choice Simplification

2

- Intuitive Decision Making
- Directional Priority Given to On-Ramp
- Positive RT Turn to Pebble Beach
- Ramp Speed



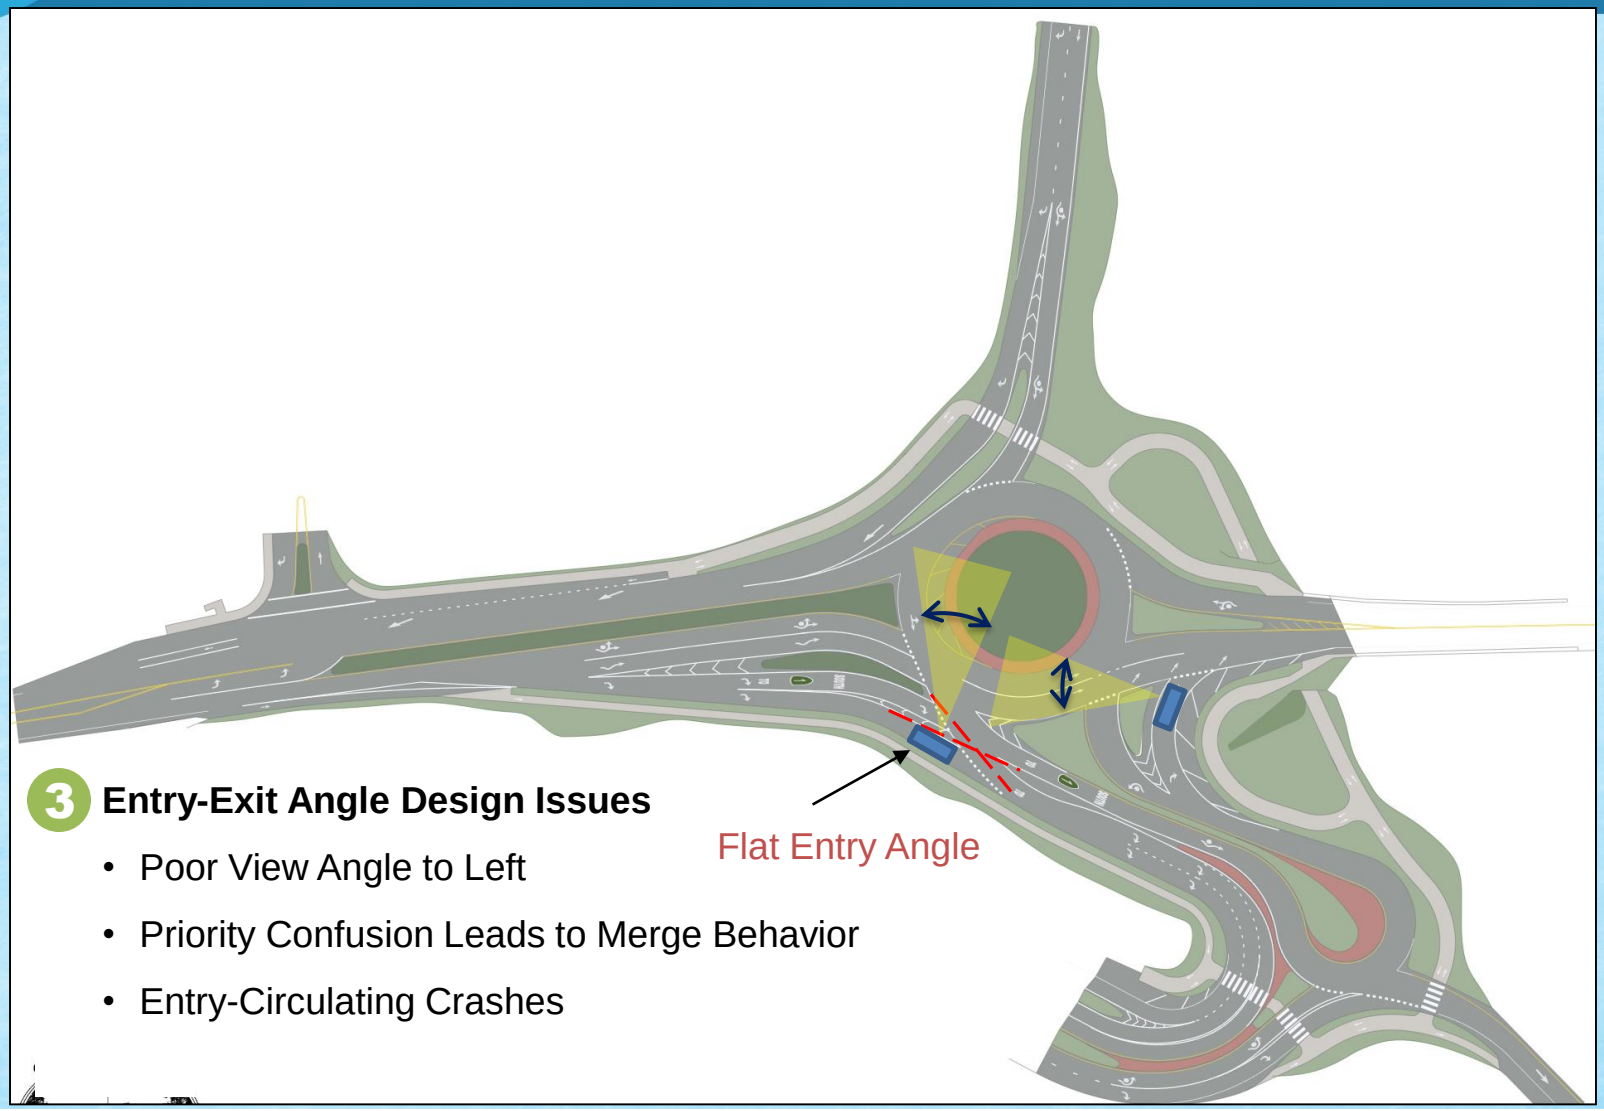
Positive Right Turn into Pebble Beach

Existing Hwy 1 SB On Ramp
45 mph

Tear Drop
20 mph
FARWEST SAFETY

Design Optimization - Challenges

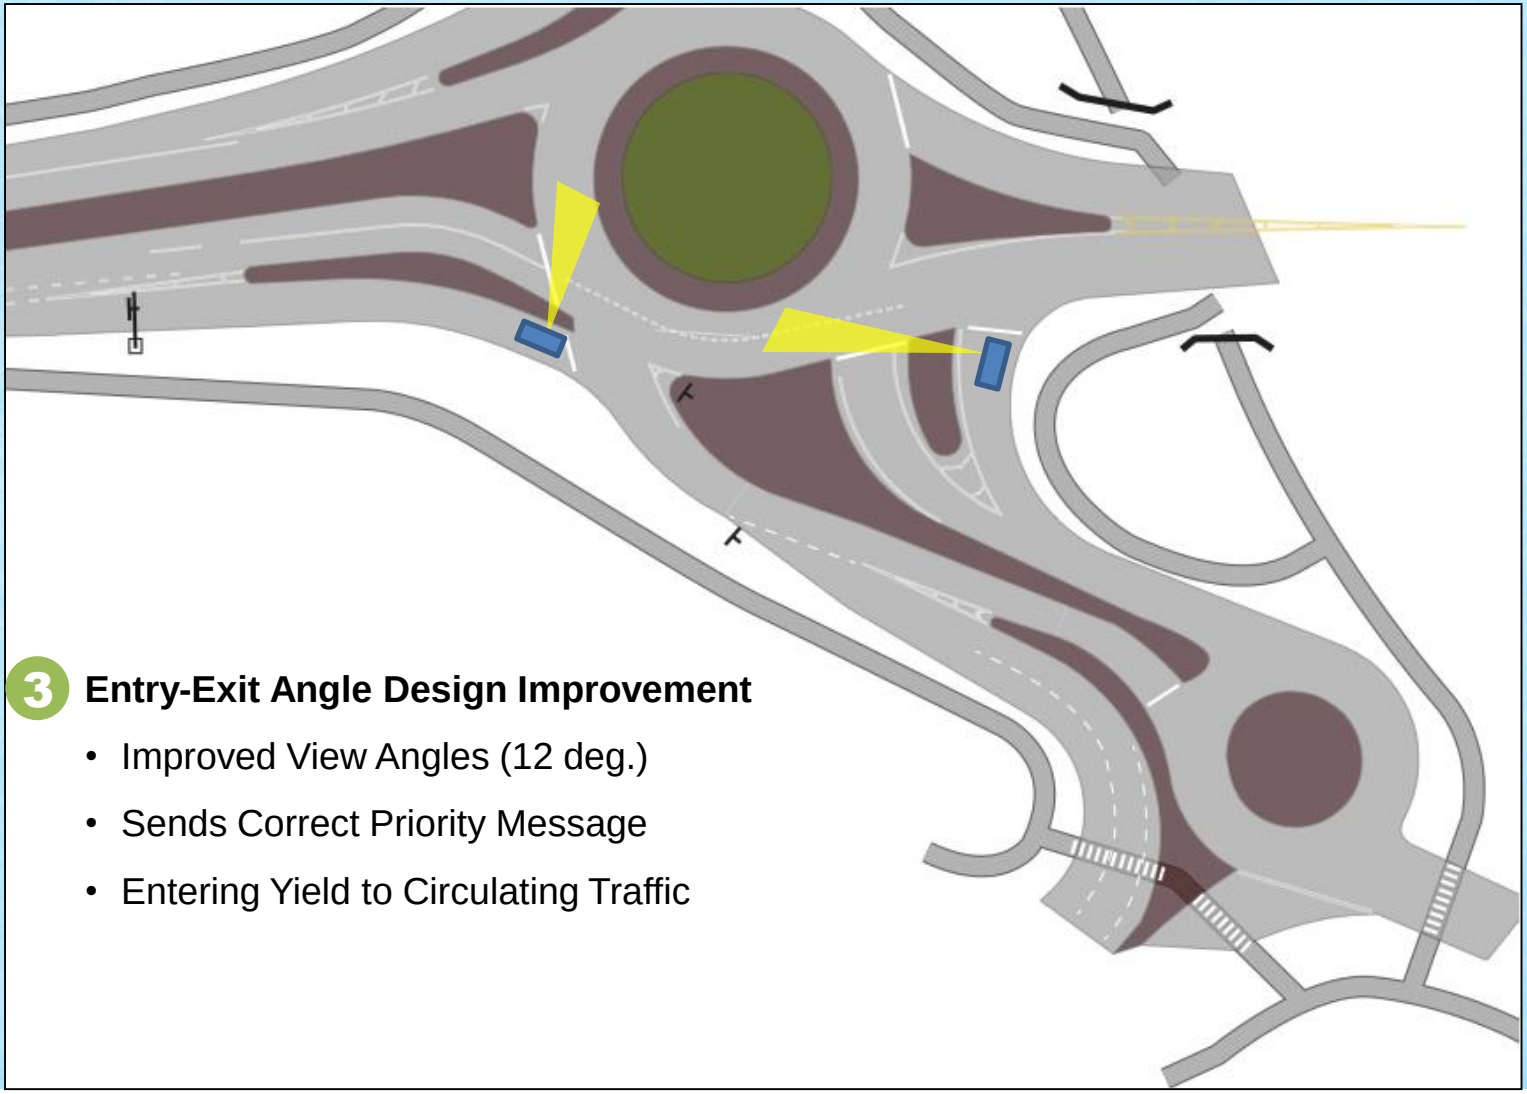
Original Concept Design



3 Entry-Exit Angle Design Issues

- Poor View Angle to Left
- Priority Confusion Leads to Merge Behavior
- Entry-Circulating Crashes

Design Optimization – View Angles

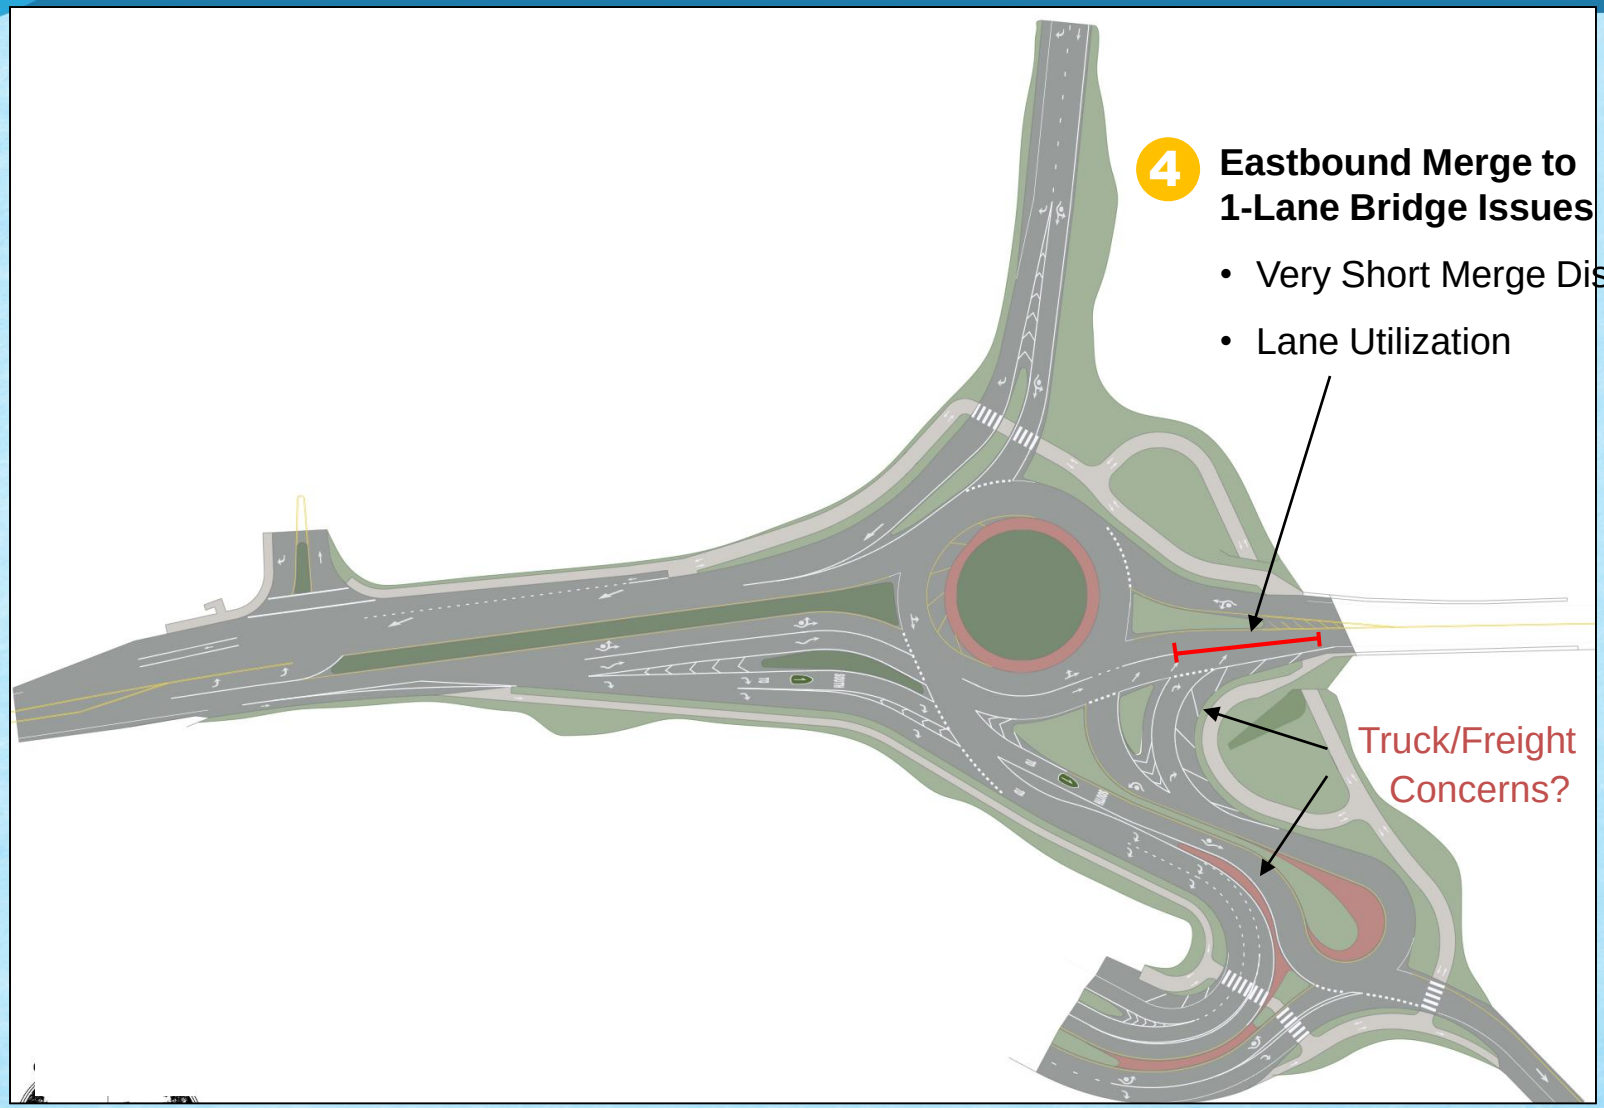


3 Entry-Exit Angle Design Improvement

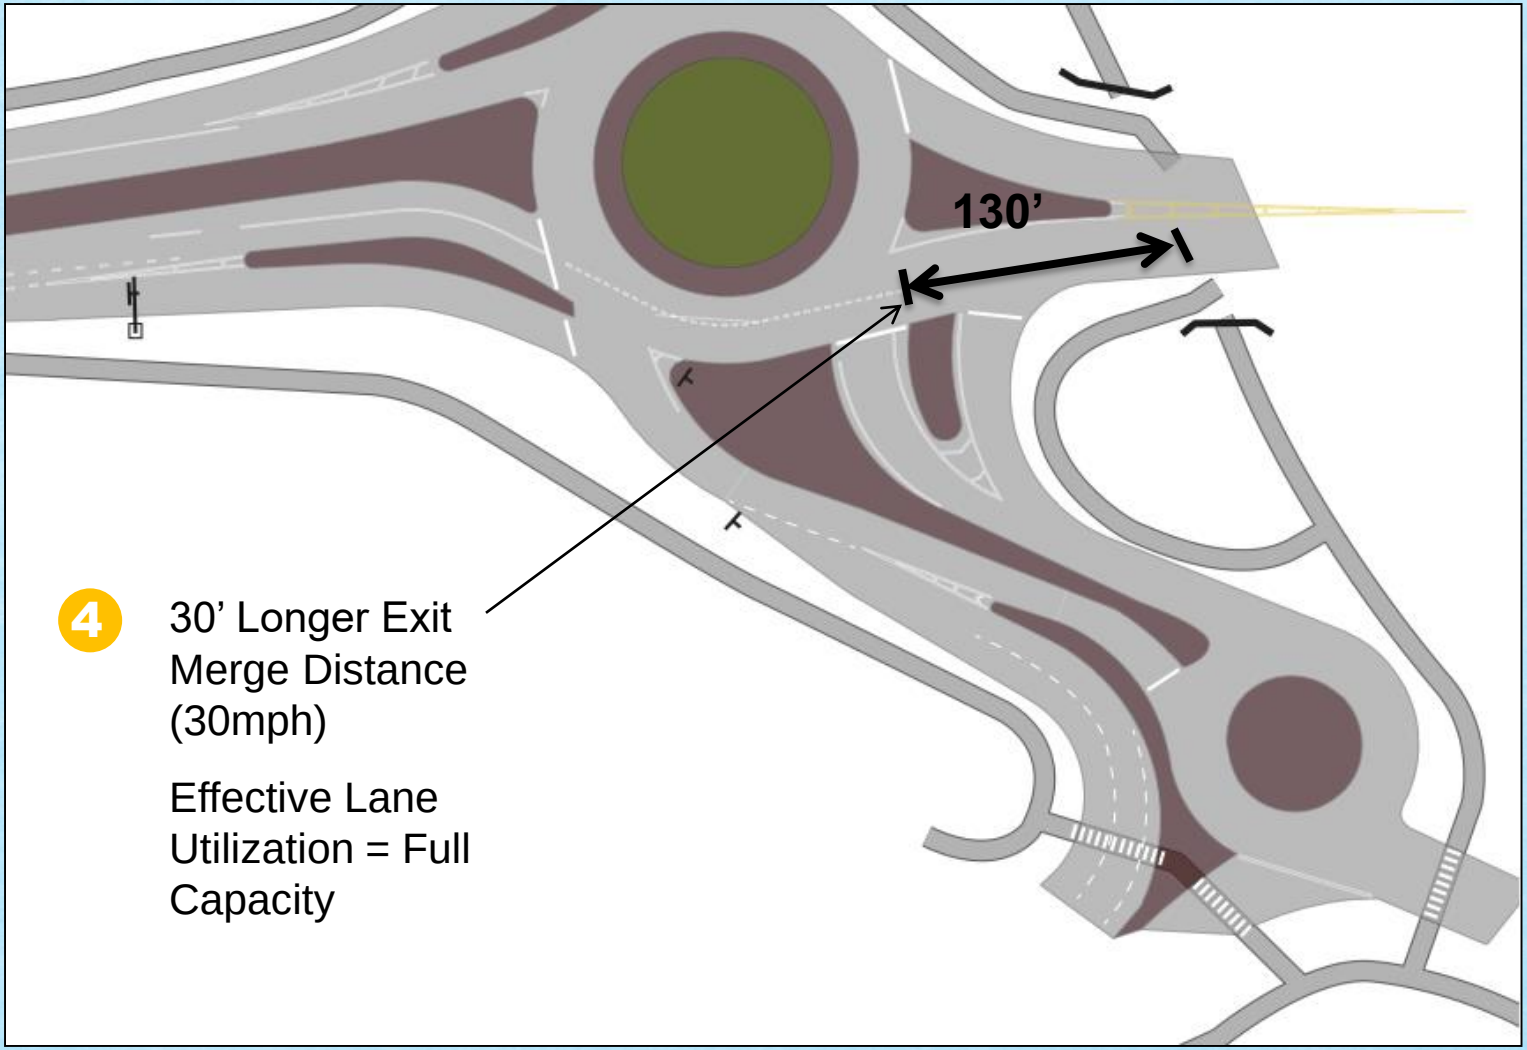
- Improved View Angles (12 deg.)
- Sends Correct Priority Message
- Entering Yield to Circulating Traffic

Design Optimization - Challenges

Original Concept Design



Design Optimization



4 30’ Longer Exit Merge Distance (30mph)

Effective Lane Utilization = Full Capacity
